

Here is the summary of all commands combined without adding the remote:

```
sh Copy code  
  
git init  
git lfs install  
git lfs track "*.csv"  
git add .gitattributes  
git add .  
git commit -m "Add large files and track with Git LFS"  
git push -u origin main
```

Notes

- **Tracking Multiple File Types:** If you need to track multiple file types, you can add them all in the `git lfs track` command like so:`

```
sh Copy code  
  
git lfs track "*.csv"  
git lfs track "*.png"  
git lfs track "*.jpg"
```

Or

```
sh Copy code  
  
git init  
git add .  
git commit -m "Initial commit"  
git remote add origin https://github.com/shahRhyme007/Salary-Predictor-ML.git  
git lfs install  
git lfs track "*.csv"  
git add .gitattributes  
git commit -m "Track CSV files with LFS"  
git push -u origin main
```
